In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Electronic Thermostatic Radiator Valves market for 2018-2023.

Thermostatic radiator valve (TRV) is a self-regulating valve fitted to hot water heating system radiator, to control the temperature of a room by changing the flow of hot water to the radiator. Electronic Thermostatic Radiator Valves use batteries and electronic thermostats to constantly monitor the temperature of the room and move the pin up and down accordingly.

Europe occupied 83.19% of the sales market in 2017. It is followed by North America which accounted for around 9.24% of the global total industry. Other countries have a smaller amount of sales. Geographically, Europe was the largest production market in the world, which took about 77.60% of the global production volume in 2017.

Over the next five years, LPI(LP Information) projects that Electronic Thermostatic Radiator Valves will register a 21.5% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$ 40 million in 2017.
