In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Electronic Waste Management market for 2018-2023.

E-waste is electrical and electronic equipment of any kind that has been discarded. Proper treatment of e-waste helps to prevent environmental degradation and avoids potential threats to human health.

First of all, one of the main reasons for growth of e-waste is rapid product innovation, especially in electronics and home appliances like migration from analogue to digital technologies and to flat-screen televisions and monitors. There has been an increased emphasis on efficient recycling and reuse of electronic products' components. Health hazards posed by the seepage of toxic materials into the environment result in e-waste management techniques' demand. In addition, increase in awareness protection drive the electronic waste management. To reduce the E-Waste generated across the world, E-Waste management initiatives are being taken by the government agencies of various regions. North America and Europe are exceptionally prone to environment contamination. Consequently, these regions are expected to contribute most to the worldwide electronic waste management market.

Over the next five years, LPI(LP Information) projects that Electronic Waste Management will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
