In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Embolization Particle market for 2018-2023.

Embolization Particle or embolisation refers to the passage and lodging of an embolus within the bloodstream. It may be pathological (in which sense it is also called embolism), for example a pulmonary embolism, or therapeutic, as a hemostatic treatment for bleeding or as a treatment for some types of cancer by deliberately blocking blood vessels to starve the tumor cells.

USA has the largest global export quantity and manufacturers in Embolization Particle market, while the Europe is the second sales volume market for Embolization Particle in 2016.

In the industry, Sirtex Medical profits most in 2016 and recent years, while Merit Medical and BTG Medical ranked 2 and 3. The market share of them is 23.11%, 17.44% and 14.53% in 2016. The gap of market share is keep on enlarged due to different strategy. Nowadays, there are four mainly types of Embolization Particle, including Microspheres, Particles, DEBs and Radio-Embolic Microspheres. And Microspheres is the main type for Embolization Particle, and the Microspheres reached a sales value of approximately 347.54 M USD in 2016, with 34.55% of global sales volume.

Over the next five years, LPI(LP Information) projects that Embolization Particle will register a 12.8% CAGR in terms of revenue, reach US\$ 2400 million by 2023, from US\$ 1170 million in 2017.
