The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global EMS and ODM (EMS & ODM) market for 2018-2023.

Electronics manufacturing services (EMS) is a term used for companies that test, manufacture, distribute, and provide return/repair services for electronic components and assemblies for original equipment manufacturers (OEMs). The concept is also referred to as electronics contract manufacturing (ECM).

An original design manufacturer (ODM) is a company that designs and manufactures a product as specified and eventually rebranded by another firm for sale. Such companies allow the firm that owns or licenses the brand to produce products (either as a supplement or solely) without having to engage in the organization or running of a factory. ODMs have grown in size in recent years and as of 2015 many have the scale to handle production for in-house the products that are branded by the buying firm. This is in contrast to a contract manufacturer (CM)

In 2016, thanks to a surge in shipments of mobile phone vendors such as Apple, Huawei, and Xiaomi, the EMS/ODM market rose by 5.17%. In 2016, the growth in mobile phone offset the drop in notebook computer market. In 2015, mobile phone will still have strong growth potential, but with the growth rate dwarfed by that in 2015. The 4G construction of Radio Access Networks reached the peak in 2015 and 2016. It is projected that the RAN market will be on the decline in 2017-2022. Moreover, the data size of mobile Internet surged, data center or cloud computing services market grew robustly.

However, the European and US EMS/ODM vendors are dedicated to improving

profitability by reducing the revenue proportion of telecom and communication infrastructure, and intensifying the expansion to industrial, medical, and automotive sectors. Meanwhile, they have also strengthened the weakness in components, and ventured into the upstream sector of industrial chains. But compared with the Taiwanese vendors, the European and US EMS/ODM peers lagged far behind in the field of components.

When there is a long-lasting trend for OEMs to outsource their manufacturing function either partly or entirely to contract manufacturers (CMs), otherwise called as manufacturing service providers, OEMs have different priorities in choosing their service providers. Among the CMs, while Electronic Manufacturing Services (EMS) providers involve only in assembling/testing and production of a product/sub-system, Original Design Manufacturing (ODM) providers move ahead in the front-end of the value chain to also involve in designing the product in addition to assembling, testing and mass production. ODMs are evolving faster in more matured sectors such as telecommunications and consumer electronics compared to specialised sectors such as automotive, industrial and defence. OEMs are less likely to choose ODMs compared to EMS for their CM activity due to some reasons such as OEMs having less control over IP rights, designs of PCBs, control boards, etc. ODMs are expected to mainly become potential competitors to OEMs.

Over the next five years, LPI(LP Information) projects that EMS and ODM (EMS & ODM) will register a 4.3% CAGR in terms of revenue, reach US\$ 654500 million by 2023, from US\$ 508600 million in 2017.
