This report study the Energy Harvesting System for Wireless Sensor Network

In a typical energy harvesting system, energy is generated from motion, a thermal source, a photoelectric source, or magnetic activity. This energy is then captured, stored, managed, and fed to a sensor for transmission.

In the coming years there is an increasing demand for energy harvesting system in the regions of North America and Europe that is expected to drive the market for more advanced energy harvesting system. Increasing of automotion fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of energy harvesting system will drive growth in China markets.

Globally, the energy harvesting system industry market is concentrated as the manufacturing technology of energy harvesting system is relatively higher than some traditional equipment. And some enterprises, like STMicroelectronics, Texas Instruments and EnOcean GmbH, etc. are well-known for the wonderful performance of their energy harvesting system and related services. At the same time, Europe, occupied 36.26% production market share in 2017, is remarkable in the global energy harvesting system industry because of their market share and technology status of energy harvesting system.
