Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Engineered Quartz Stone (EQS) market for 2018-2023.

East Engineered Quartz Stone (EQS) is made from either a natural slab that has been polished or engineered quartz composite. Quartz is one of the hardest natural materials on earth and has an appearance similar to granite. It is comprised of silicon dioxide. Pure, natural quartz slabs are very expensive and are therefore quite uncommon as countertops. The engineered type is made of 93 to 97 percent ground quartz combined with resins, binders and pigments. This combination is poured into molds and allowed to harden, then finished into the shape and style desired. This type of counter is much more affordable and common than the natural slab. The East Engineered Quartz Stone (EQS) is used for kitchen and bathroom counters, no matter in personal home or commercial establishments or other industries.

The technical barriers of Engineered Quartz Stone are not high. And the manufacturing bases relative scattered; some of the key players in this market including COSENTINO, Caesarstone, Hanwha L&C, Compac, and others.

In the past few years, due to the increase in the prices of major raw materials, it is expected that the price of engineering quartz stone raw materials will keep rising in the short term. With the strong demand for engineering quartz stones downstream, it is expected that the price of engineering quartz stones will continue to rise in the coming years. However, the increase in energy, transport costs, and employee wages will play an important role in promoting the cost of quartz stone.

There are companies adding new capacities and aims at the cost and quality leadership

which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The oversupply of Engineered Quartz Stone in the market has had a negative impact but has been countered by the magnitude of the increase in demand, resulting in uncertainty in the Engineered Quartz Stone market.

Over the next five years, LPI(LP Information) projects that Engineered Quartz Stone (EQS) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
