Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ethylene Carbonate market for 2018-2023. Ethylene carbonate (sometimes abbreviated EC) is the organic compound with the formula $(\text{CH}_2\text{O})_2\text{CO}$. It is classified as the carbonate ester of ethylene glycol and carbonic acid. At room temperature (25 °C) ethylene carbonate is a transparent crystalline solid, practically odorless and colorless, and somewhat soluble in water. The growth of the ethylene carbonate market is primarily driven by the increasing demand for ethylene carbonate across various applications, such as lithium batteries electrolytes, lubricants, coatings, and plasticizers. However, factors such as the scarcity of raw materials and regulations over the use of ethylene carbonate are restraining the growth of this market.

Over the next five years, LPI(LP Information) projects that Ethylene Carbonate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
