In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Exoskeleton market for 2018-2023.

Exoskeleton is a mobile machine consisting primarily of an outer framework worn by a person, and powered by a system of motors, hydraulics or Pneumatics that delivers at least part of the energy for limb movement.

The main function of a powered exoskeleton is to assist the wearer by boosting their strength and endurance. They are commonly designed for military use, to help soldiers carry heavy loads both in and out of combat. In civilian areas, similar exoskeletons could be used to help firefighters and other rescue workers survive dangerous environments. The medical field is another prime area for exoskeleton technology, where it can be used for enhanced precision during surgery, or as an assist to allow nurses to move heavy patients.

As international economic situation is complicated, in the next few years there will be many uncertainties. The demand is strong in US and Europe, without of the influence of the world economy situation.

Japan, Germany, US, UK are major consumption regions in Exoskeleton industry market.

The exoskeleton industry is a new high-tech industry, and only a few companies in developed countries can make breakthroughs. Therefore, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Exoskeleton field hastily.

Over the next five years, LPI(LP Information) projects that Exoskeleton will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
