## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Expanded PTFE market for 2018-2023. Expanded PTFE (EPTFE) is one of the more innovative variations in the processing and application of PTFE in recent times.

EPTFE is used to make lightweight, waterproof and breathable fabrics, micro-porous membranes, medical tubes and implants, microwave carriers, industrial sealants and high-tensile fabrics and cords.

Discovered in the 1970s, the EPTFE process is unique in that it does not require the use of soluble fillers, foaming agents or chemical additives. The product itself is chemically identical to PTFE - except that it constitutes billions of small pores within the structure of an article of PTFE. This gives it new mechanical properties and results in significant material savings.

Over the next five years, LPI(LP Information) projects that Expanded PTFE will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
