The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Facial Water Spray market for 2018-2023.

The Facial Water Spray usually consists of natural mineral springs or hot spring water, containing a large amount of minerals and trace elements. In addition to moisturize the skin, the Facial Water Spray can balance skin water and oil, soothe skin pressure, resist allergies, and increase natural skin protection.

The Facial Water Spray market is characterized by the presence of many vendors. These vendors are increasingly competing against each other based on factors such as access to raw materials, economies of scales, product innovations, and ability to recycle as the cost of raw materials is very high. Vendors in Facial Water Spray market are focusing on gaining faster access to the raw materials and lowering the manufacturing costs of Facial Water Spray. They are also focusing on customization of products as per end-user industries.

The Facial Water Spray market is expected to witness significant growth during the forecast period, owing to changing lifestyle and rapid urbanization. Moreover, rise in awareness towards skin care by use of advanced skin care products and consumers shift towards use of skin care products to maintain their skin from getting damage and spoiled, due to climatic changes, boost the market growth. However, limited shelf life of skin care products and high price of natural and organic ingredients used in these products are expected to restrict the market growth.

Some of the factors hindering the market growth include stringent government regulations and huge capital investment. Regulations play an important role, as many cosmetics used for facial care are chemically prepared and can damage the skin. Large

investments are required for research and development, as some personal care products are toxic in nature, in order to assure the safety of the product or to make use of alternate raw materials such as natural and herbal products.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not enter into this field.

Over the next five years, LPI(LP Information) projects that Facial Water Spray will register a 6.9% CAGR in terms of revenue, reach US\$ 830 million by 2023, from US\$ 550 million in 2017.
