In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fan Coils market for 2018-2023.

A Fan Coil is a simple device consisting of a heating and or cooling heat exchanger or 'coil' and fan. It is part of an HVAC system found in residential, commercial, and industrial buildings. A fan coil unit is a diverse device sometimes using ductwork, and is used to control the temperature in the space where it is installed, or serve multiple spaces. It is controlled either by a manual on/off switch or by thermostat, this in turn controls the throughput of water to the heat exchanger using a control valve and/or the fan speed.

Direct channel is a model in which no middleman involved and the products are sold from company to consumer directly. Fan Coils products are technically complex products, so the advantage of direct channel is that the products can be targeted for production, which better meet the market demands. As direct channels without intermediate links, it can reduce distribution costs, control the initiative of price, and actively participate in the competition. But there are also challenges with direct channels, such as manufacturers make large investments into selling, which are costly, and the scope of sale is restricted.

The indirect sales force acts as the conduit between the customer and manufacturer, working closely with manufacturers to communicate customer needs and working with customers to communicate the vendor's unique design and functional capabilities. Manufacturers take the combination of direct Marketing channel and distribution sales in the form, Future sales channels both direct selling and distribution needs with the help of online sales platform.

Over the next five years, LPI(LP Information) projects that Fan Coils will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
