In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fermentation Chemical market for 2018-2023. Fermentation is a classic method of producing alcohols. Fermentation is usually used starch, cellulose, agricultural products, forest products, agricultural and sideline products and wild plants as raw materials. Due to the different resources of various countries, the raw materials of fermented alcohols also have their own characteristics. Such as sugar cane, corn, wheat, cassava, corn cob etc.

The rapid development of food and beverage industry in Asia and Latin America and other emerging markets will have a positive role in promoting the development. Alcohol industry has become the dominant plate in the market, in 2013 accounted for 56.6% of market capacity. Production level of methanol and ethanol will continue to stimulate the growth of alcohol plate. Enzyme products are considered to be the fastest growing plate. In the next six years, the annual growth rate will reach 4.6%. Similarly, the global food and beverage industry is also optimistic that the next six years will continue to develop steadily.

Over the next five years, LPI(LP Information) projects that Fermentation Chemical will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
