The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Fiber Optic Cable Assembly market for 2018-2023.

Fiber Optic Cable is a cable containing one or more optical fibers that are used to carry light. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube suitable for the environment where the cable will be deployed.

The most prominent factor driving the fiber optic cables market growth is rapidly growing internet traffic worldwide. With increasing proliferation of mobile devices, number of internet users is on rapid rise since the past few years. As of March 2017, there were nearly 3.74 Bn internet users across the globe, resulting into higher requirement of internet bandwidth. The demand for unceasing bandwidth is yielding significant growth in the global fiber optic cables market. Fiber optic cable provides a constant, stable and fast internet connection that allows high speed data transfer with minimal interference. In recent past, it has become noticeable that fiber optic cables are rapidly replacing copper cables and other metal wires due to their wide range of advantages over electrical transmission.

Furthermore, increasing expenditure on network infrastructure development is another major factor pushing the demand for fiber optic cables. Considering the immense benefits of fiber optic cables, more number of network providers are shifting towards establishing optical networks. Advent of Internet of Things (IoT) is expected to generate high demand for internet bandwidth in the following years. Thus, growing number of connected devices is expected to further support the market growth. However, high

installation costs coupled with complex installation process of fiber optic cables acts as a restraint to the market. In addition, lack of industry standards have also hindered the demand for fiber optic cables in industrial environments as well as in subscriber networks.

Over the next five years, LPI(LP Information) projects that Fiber Optic Cable Assembly will register a 7.9% CAGR in terms of revenue, reach US\$ 1700 million by 2023, from US\$ 1080 million in 2017.
