Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fiber Optics market for 2018-2023.

Fiber Optic is a cable containing one or more optical fibers that are used to carry light. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube suitable for the environment where the cable will be deployed.

China is one of the largest manufacturing bases and the largest consumption area of Fiber Optics industry, over 55% Fiber Optics are manufactured in this region. Factors in near-term demand include continuation of the FTTH construction effort. Although the FTTH projects of China Telecom and China Unicom already have passed a large percentage of the homes in China's major cities, the government's requirement to improve broadband coverage in rural areas may be a factor keeping demand for optical cable at high levels after 2016.

Although sales of Fiber Optics brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Fiber Optics field.

Over the next five years, LPI(LP Information) projects that Fiber Optics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Fiber Optics market by product type, application, key manufacturers and key regions.
