## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fiber Reinforced Plastics (FRP) market for 2018-2023.

Fiber reinforced plastic (FRP), also known as fiber reinforced polymer, is in fact a composite material constituting a polymer matrix blended with certain reinforcing materials, such as fibers. The fibers are generally glass, carbon, aramid and so on. Fiber-Reinforced Plastics are composite materials that typically consist of strong fibers embedded in a resin matrix. The fibers provide strength and stiffness to the composite and generally carry most of the applied loads. The matrix acts to bond and protect the fibers and to provide for transfer of stress from fiber to fiber through shear stresses. The most common fibers are glass, carbon, and synthetic fibers. FRP composites have very high strength characteristics and are nonconductive, noncorrosive, and lightweight. According to its reinforced fibers, FRP can be classified as glass fiber reinforced, carbon fiber reinforced, aramid fiber reinforced and so on. According to the fiber length, FRP can be divided into long fiber, short fiber and continuous fiber reinforced plastics. Glass fiber reinforced plastics are the most commonly one in the FRP market. In 2017, 97% FRP are glass fiber reinforced. However, carbon fiber reinforced type has attracted more and more interests in recent years due to its distinctive characteristics. Over the next five years, LPI(LP Information) projects that Fiber Reinforced Plastics (FRP) will register a 3.0% CAGR in terms of revenue, reach US\$ 38200 million by 2023, from US\$ 31900 million in 2017.
