In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fire, Smoke, and Toxicity Retardant (FST) Composite Resin market for 2018-2023.

FST composite resins are materials that decreases the range of fire, smoke, toxic gases or postpones their access into sensitive regions. This group includes chemical agents as well as physically acting materials, e.g. fire-retardant gels, fire-fighting foams or cooling the fuels. They are called composite resins because one or more materials are mixed together to acquire the preferred properties in the end product. FST resins can be applied as coatings to an item. They have become a very distinguished in the fire retardant industry because of significance of prevention. In general, FST resins work either by starting a chemical reaction that ends the fire or by decreasing the flammability of items.

In terms of value and volume, FST composite resin market is supposed to be dominated by North America.

Over the next five years, LPI(LP Information) projects that Fire, Smoke, and Toxicity Retardant (FST) Composite Resin will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
