In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Flight Simulator market for 2018-2023.

A flight simulator is a device that artificially re-creates aircraft flight and the environment in which it flies, for pilot training, design, or other purposes. It includes replicating the equations that govern how aircraft fly, how they react to applications of flight controls, the effects of other aircraft systems, and how the aircraft reacts to external factors such as air density, turbulence, wind shear, cloud, precipitation, etc.

Flight simulators are now extensively used in the aviation industry for design and development and the training of air crew for both civil and military aircraft. In the coming years there is forecasted to be stable demand scale for flight simulator worldwide, especially in emerging market such as China and India, which is expected to drive the industry development of flight simulator. It is forecasted that the global market of flight simulator will reach as high as 4099 Million USD by the end of 2022.

Globally, the flight simulator industry market is quite concentrated as the manufacturing technology of flight simulator is super complex and is related to lots of hardware and software technology. Several enterprises, like CAE, L3 Technologies and FlightSafety International are well-known for the technology status of their flight simulator and related services. At the same time, North America, occupied 80% revenue market share in 2016, is remarkable in the global flight simulator industry because of their market share and technology status.

Over the next five years, LPI(LP Information) projects that Flight Simulator will register a 3.1% CAGR in terms of revenue, reach US\$ 4170 million by 2023, from US\$ 3480 million in 2017.
