In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Floating Power Plant market for 2018-2023.

Floating power plant plays a crucial role in electricity generation at remote areas where power generation is restricted due to scarcity of land mass. Shortage of electricity or the lack of access is one of the major development hurdles faced by many regions in developing countries. Moreover, in many countries, certain regions are not connected with their national distribution grid and off grid power is their only source of energy. In addition to that, growing concern about climate change and global warming are increasingly forcing nations to switch to renewable energy sources to meet their respective climate change targets.

Asia-Pacific is anticipated to dominate the global floating power plant market owing to the increasing renewable floating power plants in countries such as Japan, China. Over the next five years, LPI(LP Information) projects that Floating Power Plant will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
