## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Flow Cytometers market for 2018-2023.

Flow cytometers (FC or FCM) are automated instruments that quantitate properties of single cells, one cell at a time. They can measure cell size, cell granularity, the amounts of cell components such as total DNA, newly synthesized DNA, gene expression as the amount messenger RNA for a particular gene, amounts of specific surface receptors, amounts of intracellular proteins, or transient signaling events in living cells. Quantities are usually relative, but can be numbers of molecules per cell when absolute values are needed. Typically, up to three to six properties or components are quantitated in a single sample, cell by cell, for about 10,000 cells, in less than one minute (not counting time to prepare the sample, which might be an hour or more).

Due to the wide application, demand of flow cytometers increased fast in recent years. Flow cytometers market kept growing fast and will keep the developing trend. At present, USA is the main market of flow cytometers. Viewed from the supply side, there are a few manufacturers in the flow cytometers industry, while from the demand side, the current demand for flow cytometers is growing.
