Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fluoroelastomer market for 2018-2023.

Fluoroelastomers are a type of synthetic rubber which offers extraordinary resistance to chemicals, oil and heat, along with an expected service life above 200°C. This material possesses a high ratio of fluorine to hydrogen, outstanding heat stability due to absence of saturation, and exceptional oil resistance compared to other rubbers.

Fluoroelastomers are categorised based on their properties and are divided into three broader categories FKM, FFKM & FEPM. FKM accounts for (80 %+) of the all fluoroelastomer and shows finest balance of all properties, with high heat resistance, improved low temperature performance and base resistance.

Asia-Pacific is expected to show a significant growth in the fluoroelastomer market due to increasing consumption of fluoroelastomers from pharmaceutical, automotive, and food processing industries.

Over the next five years, LPI(LP Information) projects that Fluoroelastomer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
