In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fluoropolymer Coating market for 2018-2023.

Fluoropolymer coatings are the mixture of fluoropolymer lubricants and resin binders that offer features such as low coefficients of friction, excellent corrosion protection, and good chemical resistance. These coatings are based on tolerances, expected load, temperature, environment, and other significant factors. Various colors are available for aesthetics and recognition purposes. Fluoropolymer coatings also offer various advantages such as electrical resistivity, anti-galling properties, abrasion resistance, low surface tension, low friction coefficient, and low dielectric constant. Fluoropolymer coatings are used for the purpose of improving wet ability, foam reduction, anti-chipping, and for the purpose of UV protection of the coating material.

Asia Pacific is heading the global fluoropolymer coatings market.

Over the next five years, LPI(LP Information) projects that Fluoropolymer Coating will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
