In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fluorspar Acid Grade market for 2018-2023. Fluorspar Acid Grade is a type of fluorspar. The purest grades of fluorite are a source of fluoride for hydrofluoric acid manufacture, which is the intermediate source of most fluorine-containing fine chemicals. Fluorspar which contains CaF_2 more than 95% is the Fluorspar Acid Grade.

Fluorite (also called fluorspar) is the mineral form of calcium fluoride, CaF_2 . It belongs to the halide minerals. Fluorite is a colorful mineral, both in visible and ultraviolet light, and the stone has ornamental and lapidary uses. Industrially, fluorite is used as a flux for smelting, and in the production of certain glasses and enamels.

The Fluorspar Acid Grade industry concentration is high and it is a non-renewable resource, there are few manufacturers in the world, and they focused on China, Mongolia, South Africa and Mexico. In the world wide, giant manufactures mainly distribute in those areas. China has a long history and unshakable status in this industry.

Many companies have several plants and mine, but they do not usually close to aimed consumption market. So the product has high transport costs. United States, Japan and Western Europe are the main consumption areas; they have to import the product from the production areas.

In the past five years, the production and capacity were decreasing and the growth rate is low. The Fluorspar Acid Grade gas is non-renewable energy resource and the production countries make relevant policies to ensure continuous use of Fluorspar Acid Grade. There are agency predicted that Fluorspar Acid Grade will dry up in the future.

Over the next five years, LPI(LP Information) projects that Fluorspar Acid Grade will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
