The Folding Ladder is a ladder in the step ladder style with one or more (usually no more than three) one-way hinges. Ideal for use on uneven ground (i.e. stairs), as a trestle or when fully extended a fixed ladder. Some variations feature a central one-way hinge with extensible locking legs.

In the coming years there is an increasing demand for folding ladders in the regions of developing countries that is expected to drive the market of folding ladders. More-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of folding ladders will drive growth in developing regions market.

The folding ladders industry market is low concentrated as the manufacturing technology of folding ladders is relatively matures than some high-tech equipment. The revenue of folding ladders is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of folding ladders industry may not keep that fast. But it is surely forecasted that the market of folding ladders is still promising.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.
