## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fuel Management System market for 2018-2023.

Fuel management systems are used to maintain, control and monitor fuel consumption and stock in any type of industry that uses transport, including rail, road, water and air, as a means of business. They are critical in industries where extensive amounts of fuel is used by multiple team members, such as in mining, civil construction and municipalities.

The increasing demand for energy and increasing fuel prices has led us to think about the need of monitoring and controlling our fuel consumption. These two factors have together created a demand for the fuel management system market all over the world. The fuel management system enables to control and monitor the fuel consumption in transportation industry, including roads, railways, and water and air transportation. These fuel management systems are designed to effectively manage and measure consumption, thereby, allowing to control usage and save extra money. These systems are basically used for the fleets of vehicles that may even include railway vehicles and aircrafts. These systems, thus, provide us with an effective measure to monitor our fuel consumption by generating data for the purpose of optimizing fuel inventories, fuel dispense and fuel purchases. The fuel management system tracks the amount of pumped fuel for the purpose of onsite storage management.

Over the next five years, LPI(LP Information) projects that Fuel Management System will register a 7.9% CAGR in terms of revenue, reach US\$ 18100 million by 2023, from US\$ 11500 million in 2017.
