Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Fumed Silica market for 2018-2023.

Fumed silica (CAS number 112945-52-5), also known as pyrogenic silica, is white, synthetic, amorphous silicon dioxide (SiO₂) in powder form, made by flame hydrolysis of silicon compounds.

In consumption market, the global sales value increases with the 3.53% average growth rate. USA and Europe are the mainly consumption regions due to the bigger demand of downstream applications. Fumed silica has light density, which would increase the cost of transportation. So the main market players of fumed silica set up production plants in main consumption regions to save cost of transportation.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation trend according to the economy development status. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Fumed Silica will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Fumed Silica market by product type, application, key manufacturers and key regions.
