In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Gas Scrubbers market for 2018-2023.

Gas Scrubber is air pollution control devices that use liquid to remove particulate matter or gases from an industrial exhaust or flue gas stream. This atomized liquid (typically water) entrains particles and pollutant gases in order to effectively wash them out of the gas flow. In comparison to other air pollution control devices, scrubbers are very multidisciplinary, with the ability to remove solids, mists, and gases simultaneously while also providing cooling. They are also capable of handling explosive and flammable gases safely.

Over the next five years, LPI(LP Information) projects that Gas Scrubbers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
