In this report, we study the services for gas turbine. Stringent emission regulations for gas turbines and upgradation of aging fleet of gas turbine drive the market for gas turbine Services.

A gas turbine, also called a combustion turbine, is a type of internal combustion engine. It has an upstream rotating compressor coupled to a downstream turbine, and a combustion chamber or area, called a combustor, in between.

The classification of gas turbine services includes heavy duty services and aero-derivative services, and the proportion of heavy duty services is about 79% in 2017, and the proportion is in increasing trend from 2013 to 2017.

Gas turbine services are for power generation, oil & gas and other field. The most proportion of gas turbine services is for power generation, and the revenue in 2017 is about 7.94 billion USD.

Middle East region enjoys largest revenue market share in the world, with a revenue market share nearly 31.8% in 2017. Following Middle East, North America is the second largest place with the revenue market share of 24.9%. North America has large number of existing and aging gas turbines fleet in the U.S. and Canada. Large number of long term service agreements for gas turbine services are also seen this region. In addition, demand for gas turbine services for mechanical drive application for process industry will also drive the market for gas turbines services in North America.

Over the next five years, LPI(LP Information) projects that Gas Turbine Service will
