Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Gasoline Direct Injection (GDI) System market for 2018-2023.

Gasoline direct injection (GDI), also known as petrol direct injection, direct petrol injection, spark-ignited direct injection (SIDI) and fuel-stratified injection (FSI), is a variant of fuel injection employed in modern two-stroke and four-stroke gasoline engines. The gasoline is highly pressurized, and injected via a common rail fuel line directly into the combustion chamber of each cylinder, as opposed to conventional multipoint fuel injection that injects fuel into the intake tract or cylinder port. Directly injecting fuel into the combustion chamber requires high-pressure injection, whereas low pressure is used injecting into the intake tract or cylinder port.

The development of gasoline direct Injection (GDI) system is largely related to the automotive industry and other industries. The industry is expected to be quickly growing in the next several years.

Due to the stricter emission policies, High Press Common Rail Injection System is the more and more popular due to the sufficient burning. The consumption market share of Passenger Vehicle is about 64.78% in 2016 and the figure is expected to be higher in the next several years.

Over the next five years, LPI(LP Information) projects that Gasoline Direct Injection (GDI) System will register a 9.2% CAGR in terms of revenue, reach US\$ 11100 million by 2023, from US\$ 6530 million in 2017.
