## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global GBL and NMP market for 2018-2023.

NMP and GBL are mainly used in new energy industries such as lithium ion battery and new materials such as aramion, polyphenylene sulfide and polyimide. In the production of lithium ion battery, NMP is used to prepare the positive electrode material, binder and other materials to prepare the lithium ion battery.

The quality of NMP as a solvent directly affects the quality of pulping and coating of lithium ion battery and the requirement of environmental protection. As China's economic transition period to the requirement of the industrial structure adjustment, new energy and new material industry have strong support from a macro level, the lithium ion battery and aramid fiber macromolecule new material demand rapid growth, the increase of the downstream market demand will be directly drive as the demand of auxiliary materials such as NMP solvent.

Over the next five years, LPI(LP Information) projects that GBL and NMP will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
