## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Gel Documentation Systems market for 2018-2023.

Gel Documentation Systems refer to equipment widely used in molecular biology laboratories for the imaging and documentation of nucleic acid and protein suspended within polyacrylamide or agarose gels. These gels are typically stained with ethidium bromide or other fluorophores such as SYBR Green. Generally, a gel doc includes an ultraviolet (UV) light transilluminator, a hood or a darkroom to shield external light sources and protect the user from UV exposure, and a CCD or CMOS camera for image capturing.

Global giant manufactures mainly distributed in U.S. The manufacturers in U.S. have a long history and unshakable status in this field. Manufacturers such as Bio-Rad, Thermo Fisher Scientific and GE Healthcare have relative higher level of product's quality. As to China, Shanghai Tanon take above a half of native production. Most of Chinese manufactures locate in Shanghai city.

Company mergers and acquisitions, and inter-companies cooperation have occurred for development and growth. As the downstream consumption usually follows with developed and rapid economic growth areas, such as BRICS, the developed areas' company prefers investing to underdevelopment regions these years.

Over the next five years, LPI(LP Information) projects that Gel Documentation Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
