Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Geothermal Power market for 2018-2023.

Geothermal power, namely geothermal electricity, is electricity generated by geothermal energy. Technologies in use include dry steam power stations, flash steam power stations and binary cycle power stations. Geothermal electricity generation is currently used in 24 countries.

Geothermal power is considered to be a sustainable, renewable source of energy because the heat extraction is small compared with the Earth's heat content. However, it displays features of conventional power generation methods due to high capacity factors and ability to supply base load. Low emissions and non-reliance on fossil fuels are major drivers for the industry. Strong regulatory and policy framework in numerous countries across the world would foster and sustain development in the sector in the long-term.

At present there are no economic incentives for geothermal development in Mexico. As mentioned above, power generation with geothermal energy is considered conventional in Mexico, and thus it is set to compete under the same bases as fossil-fuel, conventional hydro and nuclear technologies. Therefore, it is fair to say that the main constraint for further geothermal development in this country is its economic disadvantage against modern fossil-fuel generation technologies.

An encouraging sign regarding geothermal development in Mexico is the fact that, for the first time, a private investor has carried out exploration and drilling activities.

However, no information has been disclosed, presumably because there are unresolved

legal issues that prevent the developer from effectively protecting its investment.

Over the next five years, LPI(LP Information) projects that Geothermal Power will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
