In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Glass Reinforced Plastic market for 2018-2023.

Numerous fine glass filaments collectively form glass fiber. There are two essential types of it composite and insulated. It is mostly made of silica which with other materials is produced by melting, forming, and a staple process. Each glass fiber is fine with small diameter and they are thus woven to form a certain flexible fabric. The procedure is repeated so that several layers are formed and are thus kept to dry. The end material is known as glass reinforced plastic.

Over the next five years, LPI(LP Information) projects that Glass Reinforced Plastic will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
