Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Glumatic Acid and Monosodium market for 2018-2023.

Monosodium glutamate (MSG, also known as sodium glutamate) is the sodium salt of glutamic acid, one of the most abundant naturally occurring non-essential amino acids. Glutamic acid is found naturally in tomatoes, grapes, cheese, mushrooms and other foods. MSG is used in the food industry as a flavor enhancer with an umami taste that intensifies the meaty, savory flavor of food, as naturally occurring glutamate does in foods such as stews and meat soups. It was first prepared in 1908 by Japanese biochemist Kikunae Ikeda, who was trying to isolate and duplicate the savory taste of kombu, an edible seaweed used as a base for many Japanese soups. MSG as a flavor enhancer balances, blends, and rounds the perception of other tastes.

Shift of consumer preference towards processed food consumption owing to hectic lifestyles is a key point to drive market. Processed food is seen as an easy availability to consumers with the increase in middle class disposable income levels. This factor is likely to favor processed food industry growth over the next few years. Increasing keenness towards consuming food containing natural minerals and additives such as bulking agents, antioxidants, antifoaming agents, among other coupled with increasing health consciousness by the consumer are likely to favour monosodium & glutamic acid market in future. Asia-Pacific has the highest market share for MSG and glutamic acid, the India and China food processing industries are estimated to witness a growth over the forecast period.

Over the next five years, LPI(LP Information) projects that Glumatic Acid and Monosodium will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
