Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Graphite Electrode Rod market for 2018-2023.

Graphite Electrodes Rod are used for the recycling of steel in the electric arc furnace industry. It has programmable properties, like Good electrical conductivity, High resistance to thermal shock, High mechanical strength.

The global demand for steel is expected to remain subdued. As per the World Steel Association forecast, steel consumption is projected to increase only by 0.5% in 2015 and 1.4% in 2016. On the other hand, following sizeable losses by large global graphite electrode players, additional capacity closures are not ruled out, which could correct the demand-supply skew across the medium-term. Over the long term, graphite electrode demand is estimated to grow at an average annual net growth rate of approximately 2%, based on the anticipated growth of EAF steel production (average historical growth rate of 3%), partially offset by the decline in future specific consumption.

Over the next five years, LPI (LP Information) projects that Graphite Electrode Rod will register a 0.5% CAGR in terms of revenue, reach US\$ 3170 million by 2023, from US\$ 3080 million in 2017.
