## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Gunshot Detection System market for 2018-2023.

A gunfire locator or gunshot detection system is a system that detects and conveys the location of gunfire or other weapon fire using acoustic, optical, or potentially other types of sensors, as well as a combination of such sensors. These systems are used by law enforcement, security, military and businesses to identify the source and, in some cases, the direction of gunfire and/or the type of weapon fired.

The gunshot detection system market was dominated by the homeland segment in 2016 and is expected to continue its dominance during the forecast period. Gunshot detection systems for homeland security were first used in the U.S. These systems are primarily used by law enforcement agencies. They are installed at the height of more than 30 feet above the ground at specific locations of the coverage area. These include walls, poles, streetlights, and buildings, among others. Furthermore, increase in mass shootings incidents at educational institutions is a prime concern.

Key players in the gunshot detection system market are SST, Inc., Raytheon BBN Technologies, QinetiQ North America, Shooter Detection System, and ACOEM Group.

Over the next five years, LPI(LP Information) projects that Gunshot Detection System will register a 20.9% CAGR in terms of revenue, reach US\$ 2460 million by 2023, from US\$ 790 million in 2017.
