In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Gypsum Board market for 2018-2023.

Gypsum board is the generic name for a family of panel products that consist of a noncombustible core, composed primarily of gypsum, and a paper surfacing on the face, back and long edges. Gypsum board is one of several building materials covered by the umbrella term “gypsum panel products.” All gypsum panel products contain gypsum cores; however, they can be faced with a variety of different materials, including paper and fiberglass mats.

Gypsum board is often called drywall, wallboard, or plasterboard. It differs from other panel-type building products, such as plywood, hardboard, and fiberboard, because of its noncombustible core and paper facers. When joints and fastener heads are covered with a joint compound system, gypsum wall board creates a continuous surface suitable for most types of interior decoration.

For industry structure analysis, the Gypsum Board industry is relatively concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The six producers account for about 70% of the revenue market.

Over the next five years, LPI(LP Information) projects that Gypsum Board will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
