Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Gyrocopters market for 2018-2023.

A Gyrocopter – also known as an autogyro – is an aircraft that optically resembles a helicopter. Contrary to a helicopter, a gyrocopter also features a propeller that provides forward thrust. And unlike a helicopter, the gyrocopter's rotor is not engine-powered during flight, but merely passively powered by airstream that results from the forward propulsion. This is the so-called autorotation. Because of their lightweight and compact construction, gyrocopters are classified as Ultralight Aircrafts, which leads to considerable cost advantages of flight operations and also with regard to obtaining a flight license.

The high-qualified nature of the global gyrocopters market accounts for the clear dominance of well-entrenched players that operate in international markets. This poses challenge for small players that compete with large players with respect to quality, safety, functionalities, and services. The use of newer technologies by large players to add qualitative value to existing products will further add to the woes of small players.

Over the next five years, LPI(LP Information) projects that Gyrocopters will register a 5.5% CAGR in terms of revenue, reach US\$ 77 million by 2023, from US\$ 56 million in 2017.
