Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hand-held Slit Lamp market for 2018-2023.

A hand-held slit lamp is a kind of portable ophthalmic instrument. It's a high-intensity light source often used in optometry and ophthalmology practices. It is often used with a biomicroscope to do an examination of the eyes. These lamps allow light to penetrate the eye and give the clinician or doctor an illuminated view of the anterior and posterior segments of the eye.

Hand-held slit lamp is mainly in the field such as ophthalmology and veterinary hospital. According to our investigation, hand-held slit lamp is not an essential equipment for every ophthalmology hospital, compared with the table top slit lamp. In some situations where the table top slit lamp is not available or not convenient to use, hand-held slit lamps are needed.

According to the investigation of our team and the interview with some insiders, hand-held slit lamp is relatively a new type of medical equipment; the market growth rate was considerable over the past five years. But most of them do not think hand-held slit lamp will take the place of desk-top slit lamp, and the market of hand-held slit lamp will always be much smaller than the market of desk-top slit lamp.

Over the next five years, LPI(LP Information) projects that Hand-held Slit Lamp will register a 1.6% CAGR in terms of revenue, reach US\$ 60 million by 2023, from US\$ 55 million in 2017.
