Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hardware in the Loop market for 2018-2023. Hardware in the Loop (HIL) simulation is a technique that is used in the development and test of complex process systems. HIL simulation provides an effective platform by adding the complexity of the plant under control to the test platform. The complexity of the plant under control is included in test and development by adding a mathematical representation of all related dynamic systems. These mathematical representations are referred to as the “plant simulation.”

The hardware in the loop market is related concentrated market; the revenue of top ten manufacturers accounts about 70% of the total revenue in 2016. The high-end products mainly come from Europe and USA.

Innovation and Development of simulation test projects has led to the increasing demand for Hardware in the loop. Increasing simulation test projects across the globe, especially in the Asia-Pacific is another major factor, driving the growth of the HIL system market during the forecast period.

Over the next five years, LPI(LP Information) projects that Hardware in the Loop will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
