Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hexane market for 2018-2023.

Hexane is an alkane of six carbon atoms, with the chemical formula C₆H₁₄. The term may refer to any of the five structural isomers with that formula, or to a mixture of them. Hexane is an organic compound made of carbon and hydrogen that is most commonly isolated as a byproduct of petroleum and crude oil refinement. At room temperature it is an odorless, colorless liquid.

The major use for solvents containing hexane is to extract vegetable oils from crops such as soybeans, flax, peanuts, and safflower seed. They are also used as cleaning agents in the textile, furniture, shoemaking, and printing industries, particularly rotogravure printing. Hexane is also an ingredient of special glues that are used in the roofing, shoe, and leather industries. Hexane is used in binding books, working leather, shaping pills and tablets, canning, manufacturing tires, and making baseballs.

The global production of hexane increases from 556.1 K MT in 2010 to 782.6 K MT in 2014, with an average growth rate of more than 8.21%. Asia is the major manufacturing market in the world with more than half of the global total production volume, especially China, which holds 32.24% in 2014. Shell is the world leader, which holds the 14.02% production market share in 2014. Phillip 66 is the second biggest manufacturer with production of 47.6 K MT in 2014 and SINOPEC is the China leader with production share of 5.20% in 2014.

Hexane downstream is main edible-oil extractant and industrial solvents. China is the major consumption market in the world. America costs 17.06% of global hexane, while Asia (except China) holds 19.40% of the global consumption market share in 2014. Due to the pollution during the process and the toxicity of hexane, the import and export is not too much.

This industry is affected by the economy and policy, so it's important to put an eye to

economic indexes and leaders' prefer.

Over the next five years, LPI(LP Information) projects that Hexane will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
