In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hoist market for 2018-2023.

A hoist is a mechanical device for lifting material, typically consisting of a rope or chain around a drum or wheel lift, and a hook for attaching payload.

A basic hoist is defined by two chief characteristics. The first is the lifting medium, which may be a wire rope wrapped around a drum or a chain raised by a pulley. The second is the type of power utilized by the hoist. Common power-sources are hydraulics, electricity, air driven motors, and, in the case of a manual hoist, muscle power.

In the hoist market, high-end products are mainly produced by developed countries. China is the dominator of the middle and low end products. With its low price, hoist produced in China are popular around the world, especially in Southeast Asia, Africa, South America and the Middle East development countries and regions.

As the necessary industrial equipment, hoist can be used in every walk of life, including oil, petrochemical, petrol, oil depot, gas, chemical, military, electricity, mining, electronics, railway and other industries.

The global oil refinery market is expected to increase due to rising energy demand, evolving technology and new sources of the crude oil explored during the forecast period. And the oil refineries market is currently undergoing a significant reorientation, with demand moving away from the traditional strongholds of Europe and North America to other regions of the world. Growing demand from end-use industries around the world is expected to drive growth in the global petrochemical market over the next seven years. On the supply side, abundant raw material availability in the Middle East is expected to have a positive impact on growth of the petrochemical market. The shale gas boom in North America and rapidly expanding exploration & production activities in

China are also likely to drive the global market.

Over the next five years, LPI(LP Information) projects that Hoist will register a 3.6% CAGR in terms of revenue, reach US\$ 4010 million by 2023, from US\$ 3240 million in 2017.
