Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Home Energy Management Systems market for 2018-2023.

Home Energy Management Systems are devices that are installed in residential buildings to enable the provision of feedback on electricity consumption patterns and power consumption data for individual appliances. These systems perform pre-programmed functions, such as maintaining the temperature of houses. In addition, Home Energy Management Systems not only provide demand-response prompts from utility loads but also provide data about loads generated by microgrids. The data generated are provided to users, wherein they can view their energy consumption patterns and compare them with historical data.

North America accounted for the largest share of the Home Energy Management System Market in 2017, followed by Europe and Asia-Pacific. The U.S. is expected to dominate the HEMS market in North America. The market for proactive solution under the software and service segment is expected to grow at the highest rate for HEMS, during the forecast period. The latest HEMSs come along with analytical software and solutions. The integration of data analytics with HEMS can be benchmarked and it enables the comparison of previous performance with actual energy usage. This proves to be a driving factor for the HEMS market to grow.

Over the next five years, LPI(LP Information) projects that Home Energy Management Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
