The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hot Air Welding Machines market for 2018-2023.

Hot Air Welding Machine is a device which makes heated air blown into the seam area, causing the membrane surfaces to melt. A roller and the weight of the machine then presses the two sheets of membrane in the overlap together. As the welder moves away from a given seam location, the membrane quickly cools down to ambient temperature and the heat weld is completed, providing a watertight, permanent bond. When complete, the welded seam is actually stronger than the surrounding membrane. Over the next five years, LPI(LP Information) projects that Hot Air Welding Machines will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
