In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global HTCC Ceramic Substrates market for 2018-2023.

Co-fired ceramic devices are monolithic, ceramic microelectronic devices where the entire ceramic support structure and any conductive, resistive, and dielectric materials are fired in a kiln at the same time. Typical devices include capacitors, inductors, resistors, transformers, and hybrid circuits. The technology is also used for a multi-layer packaging for the electronics industry, such as military electronics, MEMS, microprocessor and RF applications.

High temperature Ceramic Substrates means that the sintering temperature is around 1,600 °C (2,910 °F).

In the short term, Japan, United States and Europe will have an unshakable status in HTCC ceramic substrates; China will play an more important role in future, driven by the strong demand from consumer electronics, aerospace & military, automobile electronics and LED market.

Over the next five years, LPI(LP Information) projects that HTCC Ceramic Substrates will register a 2.6% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$ 110 million in 2017.
