In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Human Machine Interface market for 2018-2023.

Human Machine Interface (HMI) is a component of certain devices that are capable of handling human-machine interactions. The interface consists of hardware and software that allow user inputs to be translated as signals for machines that, in turn, provide the required result to the user. Human-machine interface technology has been used in different industries like electronics, entertainment, military, medical, etc. Human-machine interfaces help in integrating humans into complex technological systems. The market for embedded HMI solution is expected to hold a larger market size by 2022 owing to increasing adoption of the embedded HMI solutions in process industry. Embedded platforms enable easy communication between two machines and provide easy access to operators, and thus help operators in process industries to gain more process visibility.

North America is expected to lead the overall market between 2018 and 2023. Factors such as growth in the discrete industries, high adoption of advanced manufacturing practices, and increasing demand for advanced software solutions in the manufacturing industries are propelling the growth of the human machine interface market in this region. The HMI market in APAC is expected to witness the highest growth rate during the forecast period. Technological innovations in different industries and increasing economic and infrastructure developments in China, Japan, India, and other Southeast Asian countries are the major factors driving the market growth in the APAC region. Over the next five years, LPI(LP Information) projects that Human Machine Interface will

register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
