Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Humanoid Robot market for 2018-2023.

A humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of all locomotion, or for other purposes. In general, humanoid robots have a torso, a head, two arms, and two legs, though some forms of humanoid robots may model only part of the body, for example, from the waist up. Some humanoid robots also have heads designed to replicate human facial features such as eyes and mouths. Androids are humanoid robots built to aesthetically resemble humans.

The public relations application accounted for the largest share of the overall humanoid robot market in 2017. The market for the education and entertainment application is expected to grow at the highest CAGR during the forecast period. The key factor responsible for this growth is the ability of humanoids to assist and even replace teachers in classrooms, creating a buzz for modernizing schools. The market for the personal assistance and caregiving application is expected to grow at the second-highest CAGR during the forecast period.

The market in APAC is expected to grow at the highest CAGR during the forecast period. APAC is likely to adopt humanoids for almost all the major applications during the forecast period. As the elderly population in APAC countries such as China and Japan is on the rise, the region is expected to employ humanoids for the personal assistance and caregiving application.

Over the next five years, LPI(LP Information) projects that Humanoid Robot will register

a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
