Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hybrid Operating Room market for 2018-2023.

A hybrid operating room is a surgical theatre that is equipped with advanced medical imaging devices such as fixed C-Arms, CT scanners or MRI scanners. These imaging devices enable minimally-invasive surgery. Minimally-invasive surgery is intended to be less traumatic for the patient and minimize incisions on the patient and perform surgery procedure through one or several small cuts.

North America accounted for the largest share of the global hybrid operating room market in 2016, followed by Europe. The large share in the North American region is mainly attributed to the significant investments by hospitals to upgrade their operating rooms, coupled with the increasing number of surgical procedures and ambulatory surgery centers in the region. The Asia-Pacific region is expected to register the highest growth rate during the forecast period, due to the rapid growth in the healthcare expenditure in emerging APAC countries such as China and India, which will support the adoption of advanced surgical & diagnostic technologies in their respective healthcare systems during the forecast period.

Over the next five years, LPI(LP Information) projects that Hybrid Operating Room will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
