Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hydrogen Generation market for 2018-2023.

Hydrogen generation market refers to the market where hydrogen is generated using different processes such as steam reforming and electrolysis. The hydrogen generation market can be classified on the basis of product either as an on-site hydrogen generator or as a portable hydrogen generator. The generated hydrogen finds application in multiple industries such as chemical, refineries, metal processing, and transportation. The petroleum refinery segment dominated the application market owing to the increasing demand for the desulfurization of fuel called for by government regulations. This will also drive the segment during the forecast period.

The market in Asia-Pacific is expected to dominate the global hydrogen generation market during the forecast period. The Middle Eastern market is projected to grow at the highest CAGR, from 2018 to 2023, owing to a rising need for the desulfurization of fuel due to government regulations in the region.

Over the next five years, LPI(LP Information) projects that Hydrogen Generation will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
