Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hydrophilic Coatings market for 2018-2023.

Hydrophilic coatings are water-attracting coatings. They wet the surface they are applied on and provide low contact angle. They are also known as self-cleaning coatings. These coatings form a hydrogen bond with water as they exhibit ionic and negatively charged properties. Moreover, these coatings are lubricious and wettable when applied on substrates for different applications.

The medical devices market is expected to expand rapidly in the Asia-Pacific region between 2018 and 2023. As such, the demand for hydrophilic coatings is also expected to grow at the same pace in this region. As hydrophilic coatings are mostly used for medical devices, the largest consumption of hydrophilic coatings will be in regions, wherein medical devices are manufactured at a large scale. Japan, which is one of the largest manufacturers of medical devices, has a high demand for hydrophilic coatings. Manufacturers are setting up their bases and are expanding their operations in China, thus boosting the country's demand for hydrophilic coatings.

The North American region is the largest market for medical devices and implants in the world, followed by the European region. As such, the medical devices segment of the global hydrophilic coating market is growing in these regions. The increasing demand for hydrophilic coatings across the world can be attributed to factors, such as increasing usage of hydrophilic coatings in advanced medical devices, growing demand for lubricious medical devices, and increasing requirement for advanced medical techniques.

Over the next five years, LPI(LP Information) projects that Hydrophilic Coatings will

register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
