Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Hyper-Converged Infrastructure market for 2018-2023.

Hyper-converged infrastructure (HCI) is a software-defined IT infrastructure that virtualizes all of the elements of conventional "hardware-defined" systems. HCI includes, at a minimum, virtualized computing (a hypervisor), a virtualised SAN (software-defined storage) and virtualized networking (software-defined networking). HCI typically runs on commercial off-the-shelf (COTS) servers.

The APAC region is expected to play a key role in the hyper-converged infrastructure market and grow at the highest rate during the forecast period. Rising awareness of data management through common interface at reduced total cost of ownership, growing focus toward VDI, server virtualization, and popularity of using infrastructure-as-a-service (IaaS) solutions are the prime factors driving the HCI systems market in this part of the world.

Over the next five years, LPI(LP Information) projects that Hyper-Converged Infrastructure will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
